instaloader --help

Download pictures (or videos) along with their captions and other metadata
from Instagram.

What to Download:
  Specify a list of targets. For each of these, Instaloader creates a folder
  and downloads all posts. The following targets are supported:

  profile              Download profile. If an already-downloaded profile has
```

```
Select C:\WINDOWS\System32\cmd.exe

  --user-agent USER_AGENT
                       User Agent to use for HTTP requests. Defaults to
                       'Mozilla/5.0 (X11; Linux x86_64) AppleWebKit/537.36
                       (KHTML, like Gecko) Chrome/51.0.2704.79
                       Safari/537.36'.
  --max-connection-attempts N
                       Maximum number of connection attempts until a request
                       is aborted. Defaults to 3. If a connection fails, it
                       can be manually skipped by hitting CTRL+C. Set this to
                       0 to retry infinitely.
  --request-timeout N  Seconds to wait before timing out a connection
                       request. Defaults to 300.

Miscellaneous Options:
  -q, --quiet          Disable user interaction, i.e. do not print messages
                       (except errors) and fail if login credentials are
                       needed but not given. This makes Instaloader suitable
                       as a cron job.
  -h, --help           Show this help message and exit.
  --version            Show version number and exit.

The complete documentation can be found at https://instaloader.github.io/.
